

Cupolas & Weathervanes

Crowne your roof with a *Royal Crowne*

Signature SERIES (100)

The Signature Series Cupolas are manufactured solely of a solid Vinyl-PVC trimboard with a sealed edge technology, which is a rot, moisture, and insect resistant material, and capped with copper providing a maintenance free product. These cupolas are available in louvered or windowed versions.

The Signature Series Cupolas are highly detailed in construction and craftsmanship and are distinguished from the other lines of cupolas on the market today. Inspired by the beauty of English Castles, the Signature Series will add elegance and distinctive beauty to your home or institution.

Weather vanes & Finials

General Information

Finials make a great addition to the cupola as an alternative to a weathervane!

Selecting the correct size cupola

A good rule of thumb in selecting the right size cupola for your building is a minimum of 1.25" for every foot of unbroken roof ridge line. For example: if a roof section measures 24', the minimum size the cupola should be is 30". For roof length 48' and longer you may want to consider using 2 or 3 cupolas.

- Cupola size is derived from the measurement of the base width.
- Extended bases are available for steeper pitched roofs.
- Cupolas come in 2 or 3 sections for easier shipping and installation.
- All louvered cupolas can provide ventilation for your structure.
- Windows are removable for ease of installing a light fixture.
- 60" & 72" cupolas come standard with double midsections.
- Custom styles and sizes are available.

All Royal Crowne Cupolas with a wind rating are:

- Engineer drawn and approved
- Wind rated with proper installation procedures followed
- Approved for up to 120 mph wind speeds
- Available with Sealed engineer drawings
